

Scaling Up Biomimicry

Hosted by the **Biomimicry
Singapore Network**

Date: 1 December 2018 (Saturday)

Time: 10 am – 12 pm

Venue: Amozonia Landscape, 72 Loewen Road
(Dempsey Hill), Singapore

Workshop Details

The intention of our time together is to dream about the future of biomimicry and ideate on how we can make it exponential. We will explore and play with emerging technologies and consider how they may pertain to and accelerate biomimicry. How can we reach a critical mass for the wide adoption of biomimicry? How might we make the tools and practice more accessible to all? What if you had abundant resources and technology at your fingertips? What is your unique leverage point in the broad scheme of biomimicry?

About the Speaker

Leon is a maker and facilitator with a focus on innovation that is inspired by nature's genius and empowered by exponential technologies. As a technologist he dreams with others on how to utilize tech such as additive manufacturing, virtual and augmented reality, internet of things, and more. As a Certified Biomimicry Professional based in California USA, he guides change agents to seek sustainable solutions through emulating life's blueprints, chemical recipes, and ecosystem strategies. Leon takes delight in designing experiences that draw upon learning through the power of play and a deep sense of wonder and curiosity. He wishes to see leaders and organizations break out of old paradigms, galvanized by a mindset geared towards building an abundant future together for good.
